Test Project: Testing of online shop <https://shop.demoqa.com/>

The main goal is to check the online store (<https://shop.demoqa.com/>) for functionality using manual tests.

The prerequisites for each of the test cases are:

1. Access to a device (mobile phone, computer, ...) with the Internet.
2. Access to a suitable test environment.

Test Plan: Test Plan ~1

1. Introduction:

The main purpose of testing activities is to provide customers with information about the quality of the tested website - Demoqa online store. The prepared document contains key information on the testing activities. All software components that will be verified and the types of tests that will be performed have been specified.

2. Test scope:

Functional tests are currently being carried out.

3. Test items:

The components tested are:

- home page of the online store,
- new user registration panel,
- user login panel.

4. Pass/fail criteria:

The criteria are the execution of designed test cases.

5. Entry/exit criteria:

a) Entry criteria:

The phase of implementation of all previously planned components is completed.

A working and configured test environment
access to the configured virtual machine.

b) Exit criteria:

All test cases completed successfully.

The components meet all the established assumptions from the attached documentation.

6. List of functional requirements to be tested:

Attaching all documentation, user stories, scenarios, etc.

7. Test environment:

test server

windows 11 Home 64 bit

8. Test schedule:

functionality verification -3h

execution of previously designed test cases - 4h

bug reporting - 2h

9. Test Report:

List of completed test cases with statuses.

10. Tool List:

TestLink

Jira

11. Incident/error management:

In the testing process, each detected error/incident should be properly reported to the Jira system. Each reported problem should include the error priority, assigned person to fix (developer) and, if possible, the component affected by the problem.

According to the flow adopted by our company, such a problem should be fixed by the developer and sent to retests.

12. Roles and Responsibilities:

Kornelia Jaźwińska - manual tester - designing and executing test cases, manual tests, reporting in Jira

Jan Kowalski - frontend software developer - checking bugs with Jira, ongoing repairs - improving the written code

Darek Nowak - backend software developer - checking errors with Jira, ongoing repairs - improving the written code

Anna Nowak - Project Manager - team-client communication
